Projects and Teams Work Units Tasks Schedules Resource and Working Categories Costs and Expenses Project-specific Settings Cost Management All the resources: Time Heading Work Package Working Days Time Management Project Documents Project Simple is a powerful project management tool that comes with a minimalistic design to make you smarter and simplify the planning of your projects. In order to have an overview of your project tasks you can drag and drop the tasks into columns. You can combine several type of tasks in one work package, work package cost and work package item. ProjectSimple is a version of ProjectPlanner. Create projects Project planning tools are designed to help you plan your projects and keep you organized in your projects. Project plans are organized in the form of a Gantt Chart or a tree diagram. It's the basic tool used by project managers in order to organize their projects. You need to manage tasks that are divided into sub tasks. You can add, modify or delete tasks. ProjectSimple provides you a very simple way to create your own project and make a perfect Gantt Chart. Work units A work unit is a set of tasks that are connected to each other. A work unit can be an action, a milestone or a deliverable. These are just some of the work units that you can use when managing a project. You can also use work units to organize your projects and make them more specific for specific project areas. Creating a work unit is a simple job. You can create them directly with the mouse or by dragging tasks into the right areas of the work unit. Create tasks A task is a specific action that must be completed in a certain date and time. Creating a task is very simple. You can add it on your project by just dragging tasks from your tasks list to the project. You have to specify if you create a fixed date task or if you want to make it a fixed date and time task. Resource and Work item management Resource management is a very important step in any project. You can create a resource and assign it to the project in a few simple steps. You have to assign a category to the resource. For example you can assign a category for salaries or category for consumables. After assigning a resource to the project,

I'm trying to use a filter parameter to test whether a user has access to the current record before I perform actions on it. I'm using.NET MVC 2, so my Controllers are strongly typed. So, a typical ActionMethod would look like this: [Authorize] [AcceptVerbs(HttpVerbs.Post)] public ActionResult Edit(Car car) { if (!HttpContext.Current.User.Identity.IsAuthenticated) 09e8f5149f
