**FotoFly Photo Backup Free Download PC/Windows 2022 [New]**

The application has a console mode and also a Windows API based frontend that is a small program with a dialog that allows you to configure the backup settings. The application was developed to be as simple as possible and as powerful as possible. The main goal of the application is to create backups as quick and easy as possible. The command line mode allows you to create a full backup (and optionally an incremental backup and/or a metadata backup) of a collection and/or individual images. The frontend lets you select what collections to backup, what the incremental backups will include, what the metadata backup will include, the directory where the backup will be stored and much more. The application also has two debugging options to help

---

finding bugs, the old way of manually deleting files and directories and the new way of going through a scenario, where you can see how the application handle the files and directories. Finally, the application makes use of the command line processing and the Windows API. This makes it relatively fast and robust. FotoFly Photo Backup Features - A simple interface that allows you to select what collections to backup and/or what images you want to include in the incremental backup or the metadata backup. - You can select individual images as well as collections of images. - You can select the directory where the backups will be stored, which makes it easy to move them to a different directory when you are done with them. - The application creates two new files for each file it backs up. The first file is a date and time stamped version of the file and the other is a version that has the time and date of the last full backup. - It automatically creates a metafile for each image and include all image metadata. - The application can automatically delete old files/directories when the time in the last file/directory is older than 2 days. - The application makes use of the command line processing to speed up backups and the Windows API to create less error prone code. - You can use the application both from the command line and from the Windows API. - You can run the application both from the command line and from the Windows API. The Full backup creates a complete copy of all the files in a given folder. It also fills the tag and keymacro fields with the value and keymacro of the original image. This allows you to re-use these fields in the XMP (Exif) header of images which means that you can get your images into more software. The incremental backup copies just the files changed since the last incremental backup. The incremental backup can be very small if you just want to backup the files which have changed since the last backup. The Metadata backup creates a tiny copy of the source image with all its metadata intact. The thumbnail and keywords are all kept. This allows you to keep your collection in the same place without getting a copy. THE APPLICATION OPTIONS - "--help" display help info - "--version" display program version - "--helpfull" display full help - "--usage" display usage - "--helpfullflags" display full usage info, with each flag - "--version" display program version - "--helpfullflagsflags" display full usage info, with each flag, and display them in a way that will allow you to see the effect of each on the overall results - "--noopt" turns off

## FotoFly Photo Backup

The FotoFly Photo Backup application was developed to be a small command line tool that allows you to create Full, Incremental and Metadata backups of photos collections. The Incremental backup copies just the files changed since the last full backup. The Metadata backup creates a tiny copy of the source image with all it's metadata intact. The Incremental backup and Metadata backup can be created to be incremental daily, weekly, monthly, yearly and on demand. There are also options to create custom backups, for example taking a single photo file and backing up it over and over. The Metadata backup can be compressed to save disk space. Usage: To backup the FotoFly photo library, run the command: `fotoFly -b FULL -c INCREMENTAL -i Metadata -t DIR -o DEST` The command-line options can be grouped as follows: `-b BACKUP` : Define the type of backup Type: (incrmetadatato daily, weekly, monthly, yearly) The "default" is annual `-c FULL`: Create the full backup. Use this if you want to recover the entire library. `-i INCREMENTAL`: Make incremental backups (only changes since last full backup). `-t DIR`: Define the directory that will hold the backups. `-o DEST`: Define where to place the backups. `-f FILES`: Backup only the specified file. `-h HOST`: Specify the host to connect to and login with. Use '-' for no username. `-u USER`: Use the

---

provided username and password. -p PASS: Use the provided password. Examples: See all available options by running: fotoFly -h Example 1: full and incremental backup to default directory on local machine Command line: fotoFly -b FULL -c INCREMENTAL -i Metadata -t YEARLY -o DEST Example 2: Full backup to directory on local host, with username "jlb", password "fileadmin", and incremental daily backup to directory on remote host. (Repeat this command for daily backups on every host.) Command line: fotoFly -b FULL -c INCREMENTAL -i Metadata -t YEARLY -f jlb -r 192.

#### What's New In FotoFly Photo Backup?

It can be used to backup photos in the order that they are displayed in a folder. To backup a folder use the '--targetdir' option. For example: FotoFly Photo Backup 2.5.0 FotoFly Photo Backup --targetdir C:\photos FotoFly Photo Backup 2.5.0 FotoFly Photo Backup --targetdir C:\photos\FotoFly\ When the target directory exists it will create a sub directory with the same name as the backup name. For example: FotoFly Photo Backup 2.5.0 FotoFly Photo Backup -full --targetdir C:\photos FotoFly Photo Backup 2.5.0 FotoFly Photo Backup -full --targetdir C:\photos\FotoFly FotoFly Photo Backup 2.5.0 FotoFly Photo Backup -incremental --targetdir C:\photos FotoFly Photo Backup 2.5.0 FotoFly

---

Photo Backup -incremental --targetdir C:\photos\FotoFly  
FotoFly Photo Backup 2.5.0 FotoFly Photo Backup  
-metadata --targetdir C:\photos FotoFly Photo Backup 2.5.0  
FotoFly Photo Backup -metadata --targetdir  
C:\photos\FotoFly

---

## System Requirements:

Minimum system requirements are as follows: OS: Windows 10 64-bit (Win 10 Home/Pro/Enterprise/Professional) CPU: Intel Core i3 2.8Ghz / AMD A8-3850 RAM: 6GB HDD Space: 25GB Graphics Card: Nvidia GTX 760 Display: 1680×1050 (1366×768 recommended) The minimum graphics requirements are a DirectX 11 compatible graphics card with: Nvidia Geforce GTX 660 2GB Nvidia G
